

Click & Scout

THE NEXT GENERATION
SCOUTING SOFTWARE

Data Project
A GENIUS SPORTS COMPANY

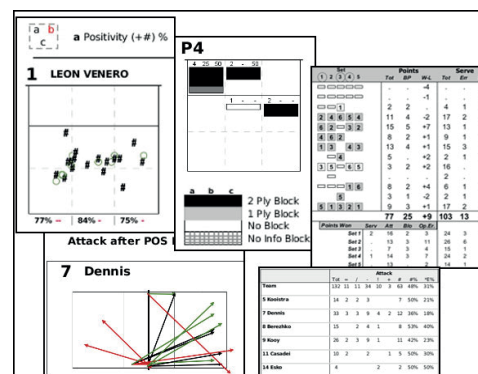

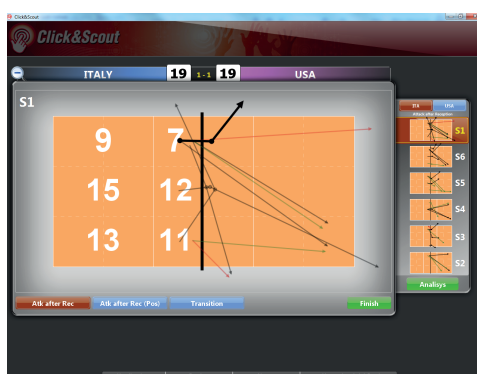

www.dataproject.com

Click&Scout is:

User friendly - The program will guide you through all the game phases, from the first to the last point. With just a few clicks you can scout the serve, reception, attack and block. The graphic interface shows you exactly what you are seeing on the court, from the attack positions right up to the reception positions.

Innovative - Because it uses all the new technologies and devices that are part of our everyday life. The software works on Tablets Android, iPad and Windows; Windows PC and Mac.

Cost effective - All the options you need for scouting and analysing the match directly from the bench.

- **Easy scouting:** The user friendly interface lets you step right into the game! Serve, reception, attack, block: with just two clicks the program is capable of following the match automatically assigning valuation effects. You can change the evaluation parameters according to your requirements.

- **Real positions on court : Reception:** set the teams according to the most commonly used reception schemes. This will guarantee a real vision of what is happening on court to ease the scouting process. You can customize these schemes for each team or you can choose to use none (useful for small local teams that are yet to have specific roles in the team). **Attack:** players move according to their usual first and second line attack. This makes sure that you don't have to remember the number of the players that perform each hit. You can, once again, choose to move players according to your needs.

- **Directions and colours:** The last scouted direction, for serve or attack, is traced with the bigger arrow. Colours change

according to the effect of the skill: black for point (point after serve or winning attack), green if the rally continues, red for a point made by the opposite team (serve out or attack error).

- **Interactive Analysis:** Displays, rotation after rotation, serve and attack directions in real time. **Serve:** Shows the directions and the effects of the serving player before each rally. **Attack:** Shows the directions and the effects of the attacks of the receiving players before the start of the rally. All attacks, for both teams, can be viewed during the current rally.

- **Analysis of the attack on screen:** You can see, at any time, for each rotation and for each team, the analysis of the total attacks after reception, after positive reception and on counterattack. This feature is useful to show players, during the match, the setter calls during the different phases of the match.

- **Print:** Click&Scout creates match reports in Data Volley style, attack directions by rotation (serve and attack) divided by player, general statistics, attack statistics,

team reception and team distribution. All in PDF format.

- **Beach Volleyball:** For scouting matches with 2, 3 and 4 players. Just choose how many players are on the court and start a new game. Back row lines disappear and attacks become Powerhits, Shot and Poke, terms now familiar to all.

E-SCORESHEET

The electronic report officially used by FIVB, CEV and many League and Federations

LITESCORE

The portable scoreboard for all needs, from gaming to training

DATA VOLLEY 4

The software for volleyball statistic scouting used worldwide

DATA VIDEO ESSENTIAL

The video analysis software for the complete synthesis of the rotations

VOLLEYBOARD

The software used to manage multimedia sporting events
